

IRIS MATOS

787-668-6954 | GERAIRISM@GMAIL.COM | FL

PROFILE

Psychology student interested in human-AI interaction, HCI, accessibility, and AI education. Experience building AI-assisted tools, facilitating workshops, organizing student communities, and exploring how we can better support neurodivergent learning and long-term human-AI collaboration.

EDUCATION

A.A | Psychology Transfer Path
College of Central Florida | 2026 - Present
3.9 GPA | Summer 2027 Graduation |
Transfer plan to HCI program

B.A | Psychology Coursework
Albizu University, PR | 2025 - 2026
3.9 GPA | 33 credits before transfer |
Focus: Interdisciplinary, Cyberpsychology

SKILL BUILDING

AI & Development: Claude, Claude Code, ChatGPT, Python, Git/GitHub, AI-assisted prototyping

Design: Figma, Adobe Creative Suite, UX design, graphic design, presentation design, video editing

Curiosity: HCI, accessible interfaces, experimental psychology, ethics, debate, effective speaking, piano, sculpting

Language: Bilingual English/Spanish - (Both Native Level)

Linkedin:

COMMUNITY

AI Workshop Organizer & Facilitator | Boys and Girls Club, Loiza, PR 2026

- Proposed, designed, and led the first hands-on AI literacy workshop in my local town for 12 children after independently approaching the organization. Participants created their own projects; two built games.

Social Psychology Club Vice President | Albizu University 2025-2026

- Founding VP of the social psychology club. Volunteered to design and delivered the club's brochure for its campus introduction; helped staff the club table and promoted the club to other students.

Study Group Facilitator | Albizu University 2025

- Recruited classmates and organized peer study sessions built around teaching concepts to one another.

DESIGNER

Junior Graphic Designer | Ampush (Tinuiti) 2021 - 2023

- Completed 50+ design projects, taking work from initial ideas through feedback, revisions, and delivery while meeting overlapping deadlines.

& BUILDER

▲ **Independent Research | How do People Recognize Minds in AI? | 2026**

- Turning debates about AI minds into a proposed study of human moral judgments.
- Comparing descriptions of systems using silicon, mouse neurons, or human neurons.
- Asking whether a system's material changes judgments of experience and harm.
- Reviewing literature and seeking feedback before collecting data.

▲ **App Build | Personal Voice-Based Personal AI App - Amira | 2026**

- Built a voice-based AI app because text-heavy conversations were difficult for me.
- Used Claude Code, Python, and Svelte to build a working prototype.
- Added voice input, spoken replies, and a choice of voices.
- Used the app for months and refined it through 100+ pull requests.

▲ **App Build | OS Rolling Context Window | 2025**

- Built an Open WebUI feature to make long conversations easier to continue.
- Added controls to summarize older messages and choose where active context begins.
- Kept earlier information available through summaries instead of resending entire conversations. Developed the feature with Claude Opus 4.5 and used it for months.
